SCMT2303 Global Logistics and International Trade**COURSE DESCRIPTION**

In this course, the learner will learn about the impact of businesses operating in a global environment, including topics such as global sourcing and global operations, cultural, political, social, and economic trends, and issues that affect supply chain operations. The course will also illustrate how important it is today to integrate global sourcing decisions with inbound logistics and to consider the total cost implications of global vs. domestic sourcing. Global sourcing examines low-cost country sourcing both from the point of view of barriers and facilitators, different types of intermediaries (customs brokers, third-party logistics and trading companies) as well as freight and payment terms. The course will enable learners to gain the ability to evaluate global sourcing alternatives and to communicate in a cross-cultural context.

Course instructors will review recordings, analyses, and data obtained through online proctoring for academic integrity infractions. It is the student's responsibility to meet the technical, software, location, and identity verification requirements necessary to enable online proctoring.
